Perspectives in Geography

Volume One/Models of Spatial Variation

Edited by **Harold McConnell and David W. Yaseen**

This volume is the first in a new series, PERSPECTIVES IN GEOGRAPHY. Each volume will deal with a single topic that is not only of concern and interest to geographers but also one that is being radically transformed in both approach and understanding by contemporary modeling strategies. Making extensive use of maps, drawings, and charts, each essay in the annual clothbound volume will be written by a distinguished contributor who is recognized as an innovative geographer. The articles published in *Models of Spatial Variation* are: "A Test of Directional Bias in Residential Mobility," by W. A. V. CLARK; "On the Arrangement and Concentration of Points in the Plane," by RICHARD L. MORRILL; "Some Properties of Basic Classes of Spatial-Diffusion Models," by JOHN C. HUDSON; "On Rural Settlement in Israel and Model Strategy," by LAWRENCE A. BROWN; "Action Space Differentials in Cities," by FRANK E. HORTON; and "DIDO Data Analysis: GIGO or Pattern Recognition?" by BRIAN J. L. BERRY. The enthusiastic acceptance of this new series demonstrates that quantitative geography is coming of age and offers an important new avenue from which the discipline may benefit.
